Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Remarks, filed 6/10/05, with respect to the rejection(s) of the claim(s) under 35 U.S.C. 102(b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Fung.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-7 and 10-20 are rejected under 35 U.S.C. 102(a) as being anticipated by Fung. Referring to claims 1, 2, 14, and 17, Fung discloses in combination with an irrigation system having system components such as a water supply valve or a water supply pump and valves for selectively directing water to irrigation devices in at least one irrigation zone, an irrigation control system comprising: an irrigation controller including a microprocessor and a memory (pg. 8, ¶3) for storing irrigation program data and schedule data corresponding to the time and duration of the flow of water to said at least one irrigation zone (pg. 32, ¶2), said microprocessor for producing control signals for activating components of the irrigation system, said microprocessor and said memory including an embedded Web server for communicating said irrigation program data and schedule data to and from HTML formats (pg. 14, last ¶), an at least

one relay in communication with said microprocessor for receiving said control signals and for switching electrical currents to said system components in response to said signals for activation of said system components (pg. 11), an Ethernet connection device for connecting said microprocessor to a LAN, whereby a network accessing device having a Web browser connected to said LAN may be used to interactively access said embedded Web server of said irrigation controller for viewing and changing of said irrigation program and schedule data (pg. 20, ¶1). Fung discloses the system of claim 1, wherein, the Ethernet connection device is an on-board Ethernet chipset. The Office interprets the use of LAN as implicitly disclosing the use of Ethernet (pg. 8, ¶1).

Referring to claims 3, 10 and 11, Fung discloses the system of claim 1, wherein, said LAN is also connected to the Internet such that a network accessing device connected to the Internet and having a Web browser may be used to interactively access said embedded Web server of said irrigation controller for viewing and changing of said irrigation program and schedule data (pg. 2, ¶1;).

Referring 4-7, 12, 13, 15, 18, 19 and 20, Fung discloses the system of claim 1, further comprising: at least one weather sensor connected to said microprocessor and said memory storing weather data from said at least one weather sensor so that said network accessing device may be used to interactively access said embedded Web server to view said weather data (pg. 2, ¶4 and pg. 21, ¶2). Fung discloses the system of claim 1, wherein, said HTML formats include a program and schedule form for viewing and changing program data including program names and run times for each zone and schedule data including start times for each program (pg. 14, ¶2

Art Unit: 2125

and pg. 20, ¶5). Fung discloses the system of claim 1, wherein said at least one relay is a triac (pg. 11, ¶2).

Allowable Subject Matter

4. Claims 8 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles R Kasenge whose telephone number is 571 272-3743. The examiner can normally be reached on Monday through Friday, 8:30 - 5 pm.
